Dear Sir or Madame:

I am writing regarding the Recombinant Bovine Growth Hormone (r-BGH). I want to express my support for the Center's lawsuit calling for the removal of r-BGH from the market given the human and animal health concerns.

I have followed this grave situation for quite sometime now and I am very distressed at how our nation is allowing Monsanto and other large companies to dictate the public's health and welfare. It is surely a crime that should be punishable to the **full extent** of the law!

Personally, I buy milk that does not contain the r-BGH, but even then I am still at the mercy of trusting that the supplier is not using this chemical. It is not only inhumane to us, but also by far more cruel to subject the animals to this madness daily. I commend the people and organizations that are diligently fighting against the many wrongs that are being fueled by money and greed!

Please help put this madness to a stop, so that all of us can again gain the benefits of drinking milk.

*Sincerely,
Carol Radford*
